The multicultural economy 2005 America's minority buying power

Jeffrey M. Humphreys

Backed by fundamentally strong national and regional economies, U.S. consumers will continue to have substantial

but varying annual gains in after-tax income, which powers their spending on goods and services. The Selig Center's estimates and projections of buying power for 1990-2010 show that minorities—African Americans, Asians, Native Americans, and Hispanics—definitely share in this success, and together wield formidable economic clout.

The buying power data presented here and differences in spending by race and/or ethnicity suggest that as the U.S. consumer market becomes more diverse, advertising, products, and media must be tailored to each market segment. With this in mind, entrepreneurs, established businesses, marketing specialists, economic development organizations, and chambers of commerce now seek estimates of the buying power of the nation's major racial and ethnic minority groups. Going beyond the intuitive approaches often used, the Selig Center's estimates provide a timely, cost-efficient, and quantitative way to assess the size and vitality of the

national, state, and sub-state racial and ethnic markets. This study provides a comprehensive statistical overview of the

buying power of African Americans, Asians, Native Americans, and Hispanics for the U.S. and all the states. Data are provided for 1990-2010. Majority—or White—buying power also is reported. [Researchers should note that multiracial buying power is estimated only as a residual, and therefore the estimates are not discussed and should be used very cautiously.]

Simply defined, buying power is the total personal income of residents that is available, after taxes, for spending on virtually everything that they buy, but it does not include dollars that are borrowed or that were saved in previous years. It is not a measure of wealth, and it does not include what tourists spend during their visits. Unfortunately, there are no geographically precise surveys of annual expenditures and income of all the nation's major racial and ethnic groups. Even estimates of expenditures by race or ethnicity are difficult to find, especially for individual states and counties.

The Selig Center addresses this problem by providing estimates of African American, Native American, Asian, White, Hispanic, and non-Hispanic buying power from 1990-2005 for the nation, the fifty states, and the District of Columbia. Also, five-year projections (2006-2010) are provided for all groups. Estimates for Georgia's metropolitan areas and counties and for Florida's metropolitan areas and counties also are included. These current dollar (unadjusted

for inflation) estimates and projections indicate the growing economic power of various racial or ethnic groups; measure the relative vitality of geographic markets; help to judge business opportunities for start-ups or expansions; gauge a business's annual sales growth against potential market increases; indicate the market potential of new and existing products; and guide targeted advertising campaigns.

The estimates for 1990-2004 supersede those previously published by the Selig Center. The revised data for those years, as well as the preliminary estimates for 2005-2010, should be considered only as the first step toward a more comprehensive analysis of the market. Anyone considering the investment of substantial capital in a new enterprise, a new product line, or a new advertising campaign will need extensive feasibility analysis to determine market opportunities more precisely.

This article only reports buying power estimates and population data for 1990, 2000, 2005, and 2010, but annual data for the entire period, 1990-2010, are available on the CD that is included in the full package.

Total Buying Power Statistics

he Selig Center projects that the nation's total buying power will rise from \$4.3 trillion in 1990 to \$7.2 trillion in 2000, to \$9.1 trillion in 2005, and to \$11.8 trillion in 2010. The percentage increase for 1990-2010 is 177 percent, which far outstrips cumulative inflation. (For example, the U.S. Consumer Price Index for All Urban Consumers (CPI-U) will increase by approximately 68 percent during the same period.) From 1990-2005, total buying power will rise by 113 percent and the consumer price index will rise by 48.9 percent. Total buying power will expand by 27 percent from 2000 through 2005, and by 30 percent from 2005 through 2010. By comparison, the percentage change in the consumer price index for 2000-2005 and for 2005-2010 will be 13.1 percent and 12.6 percent, respectively.

Diverse forces support this substantial growth. The 21year span encompasses a mild recession in 1990-91, the longest economic expansion in the nation's history from 1991-2000, and another mild recession in 2001. As this is written, GDP again is expanding and the baseline assumption calls for moderate growth through 2010. Although U.S. buying power will grow, the state-level buying power estimates show an uneven expansion. Buying power is rising much faster in the Mountain and Southern states than in the Middle Atlantic and Central states. Ranked by percentage change in total buying power between 1990 and 2005, the top ten states are Nevada (249 percent), Arizona (185 percent), Colorado (178 percent), Utah (168 percent), Idaho (158 percent), Georgia (150 percent), Texas (149 percent), Washington (145 percent), New Mexico (135 percent), and Tennessee (134 percent).

That the state estimates show differing outcomes is not surprising, given the differences in industrial bases, the importance of exports, dependence on defense spending, construction markets, labor markets, immigration rates, domestic migration rates, and natural resources. As always, states with low costs of doing business, favorable regulatory environments, updated transportation and telecommunications infrastructure, and educated workforces will continue to attract domestic and international businesses.

Buying Power Statistics by Race

n 2010, the combined buying power of African Americans, Asians, and Native Americans will be \$1.7 trillion—more than triple its 1990 level of \$454 billion—which amounts to a gain of \$1.2 trillion or 268 percent. In 2010, African Americans will account for 61 percent of combined spending, or \$1 trillion. Over this 21-year period, the percentage gains in minority buying power vary considerably by race, from a gain of 397 percent for Asians to 251 percent for American Indians to 222 percent for blacks. All of these target markets will grow much faster than the white market, where buying power will increase by 177 percent.

The combined buying power of these three minority racial groups will account for 14.1 percent of the nation's total buying power in 2010, up from 10.6 percent in 1990. This 3.5 percent gain in combined market share amounts to an additional \$411 billion in buying power in 2010. The market share claimed by a targeted group of consumers is important because the higher their market share, the lower the average cost of reaching a potential buyer in the group.

■ Black Buying Power ■

In 2005, African Americans will constitute the nation's largest minority market, and their economic clout will energize the U.S. consumer market as never before. The Selig Center projects that the nation's black buying power will rise from \$318 billion in 1990 to \$590 billion in 2000, to \$761 billion in 2005, to \$1 trillion in 2010, up by 222 percent in 21 years. This overall percentage gain outstrips the 164 percent increase in white buying power and the 177 percent increase in total buying power (all races combined). In 2010, the nation's share of total buying power that is black will be 8.6 percent, up from 8.4 percent in 2005 and up from 7.4 percent in 1990. Nationally, African-American consumers will account for almost nine cents out of every dollar that is spent.

The gains in black buying power reflect much more than just population growth and inflation. Of all the diverse supporting forces, one of the most important is the increased number of jobs across the nation. Compared to 1990, employment opportunities have improved for everyone, including African-Americans. The increasing number of blacks who are starting and expanding their own businesses also contributes to the gains in buying power. The Survey of Minority-Owned Business Enterprises released by the Census Bureau in 2001 showed that the number of black-owned firms increased almost four times faster than the number of all U.S. firms, although their receipts grew more slowly than all the others. Still another positive factor pushing up the group's buying power is that African Americans are benefiting from rising levels of educational attainment. Census data show that the proportion of blacks with high school diplomas rose by 10 percent from 1993 to 2003, and that gain was the largest reported for any group.

Favorable demographic trends help, too, since the black population continues to grow more rapidly than the total population. From 1990 to 2010, the nation's black population will grow by 32.4 percent compared to 17.6 percent for the white population and 24.2 percent for the total population. Also, the black population is younger: Census 2000 data indicate that the median age of blacks is only 30.2 years compared to 37.7 years for the white population. Compared to the older white population, larger proportions of blacks will be entering the workforce for the first time or will be moving up from entry-level jobs. Conversely, smaller proportions of blacks have reached their career pinnacles, where the annual percentage increases in wage and salaries often

begin to decelerate, or are of traditional retirement age. In 2004, only 8.1 percent of blacks were over 65, compared to 13.5 percent of whites. Also, blacks increasingly are setting trends for young adults of every race. This is not surprising given that 30 percent of the black population was under 18 years old compared to 24 percent of the white population in 2004.

In 2005, the ten states with the largest African-American markets, in order, will be New York (\$74.9 billion), California (\$54.1 billion), Texas (\$51.8 billion), Florida (\$50.4 billion), Georgia (\$48.8 billion), Maryland (\$41.8 billion), Illinois (\$37.8 billion), North Carolina (\$34.3 billion), Virginia (\$32.4 billion), and Michigan (\$30.9 billion). Of these, however, Maryland, North Carolina, and Virginia are the only ones that did not rank among the top ten markets for all consumers.

One characteristic that sets the African-American consumer market apart from the Hispanic and Asian markets is that it is not concentrated in a handful of states. This vibrant consumer market is very widespread, and therefore is an attractive customer segment in many of the states. In 2005,

The Multicultural Dollar

Where Blacks Spend More

telephone services public utilities children's apparel footwear groceries

the five largest African-American markets account for 37 percent of black buying power. The five states with the largest total consumer markets account for 38 percent of total buying power. Similarly, the ten largest black markets account for 60 percent of the African-American market and the ten largest total consumer markets account for 55 percent of total buying power.

In order, the top ten states ranked by the rate of growth of black buying power over 1990-2005 are Idaho (412 percent), South Dakota (375 percent), Utah (370 percent), Montana (356 percent), Nevada (331 percent), Minnesota (315 percent), North Dakota (298 percent), Vermont (296 percent), Wyoming (279 percent), and Arizona (228 percent). All have flourishing African-American consumer markets, but none of these states is among the nation's ten largest black consumer markets. Minnesota ranks highest (30) in terms of the size of its black consumer market.

From 1990 to 2005, the ten states (including the District of Columbia) with the largest share of total buying power that is black are the District of Columbia (32.4 percent), Missis-

sippi (24 percent), Maryland (20.7 percent), Louisiana (20.1 percent), Georgia (19.4 percent), South Carolina (19.1 percent), Alabama (17.3 percent), North Carolina (14.5 percent), Delaware (13.4 percent), and Virginia (13.1 percent).

The 4.6 percent increase in African Americans' share of Mississippi's consumer market (from 19.5 percent in 1990 to 24 percent in 2005) was the biggest share shift in the nation, followed by a 3.5 percent advance in Louisiana (from 16.7 percent to 20.1 percent), a 3.4 percent increase in share in Georgia (16 percent to 19.4 percent), a 3.2 percent increase in share in Maryland (17.5 percent to 20.7 percent, and a 3 percent increase in Delaware (from 10.5 percent to 13.4 percent). The share of buying power controlled by black consumers will rise everywhere except for the District of Columbia (-9.1 percent) and California (-0.4 percent).

Due to differences in per capita income, wealth, demographics, and culture, the spending habits of African Americans as a group are not the same as those of non-black consumers (e.g., white and other races combined). Thus, as African Americans' share of the nation's total buying power expands, business-to-consumer firms can be expected to devote more resources towards developing and marketing products that meet the needs and match the preferences of black consumers. The most recent *Consumer Expenditure Survey* data (for 2003) indicate that the average black household spent in total only 68 percent as much as the average non-black household, reflecting blacks' lower incomes. The values are for money income, which differs somewhat from buying power, but nonetheless offers some insights into spending by black consumers.

Despite their lower average income levels, African Americans lead in some categories. For example, they spent more than non-blacks on natural gas and electricity, telephone services, children's apparel, and footwear. Also, blacks spent a higher proportion of their money on groceries, housing, and women's and girls' clothing. These findings strongly imply that utilities, telecom firms, and clothing and shoe stores would do well to market themselves directly to black consumers.

Blacks and non-blacks spent about the same for household operations, housekeeping supplies, men's and boys' clothing, public transportation, reading materials, and to-bacco products. Compared to non-blacks, however, blacks spent less on eating out, vehicle purchases, health care, entertainment, and pensions and Social Security.

The same survey indicates that black households are only slightly larger than the average non-black household (2.6 persons for blacks versus 2.5 persons for whites and others). Black households also are more likely to have children under 18 (0.9 persons for blacks versus 0.6 persons for whites and others). They have approximately the same number of wage earners per household (1.2 wage earners) as white and other households (1.3 wage earners), but have only 1.3 vehicles per household compared to 2 vehicles for white and other households. Only 73 percent of black households own or lease at least one vehicle compared to 90 percent of non-black households.

Moreover, there is a substantial gap in homeownership rates, which suggests a possible opportunity for market expansion in the years ahead. The 2004 data indicate that 49 percent of blacks are homeowners compared to 73 percent for whites. A decade ago, only 42 percent of blacks owned homes.

■ Native American Buying Power ■

American buying power will rise from \$19.7 billion in 1990, to \$39.1 billion in 2000, to \$51.1 billion in 2005, and to \$69.2 billion in 2010. If these projections hold, this group's buying power in 2010 will be 251 percent greater than in 1990. The 1990-2010 percentage gain is much greater than the increases in buying power projected for whites (164 percent), for the U.S. population as a whole (177 percent), and for blacks (222 percent). It is smaller than those projected for Asians (397 percent) and for Hispanics (413 percent), however. Despite this fast-paced growth, Native Americans will account for only 0.6 percent of all U.S. buying power in 2010, up slightly from their 0.5 percent share in 1990, when they accounted for only \$19.7 billion in buying power.

Many forces support the continued growth of Native American buying power, but perhaps the most important is gradually improving employment opportunities for all Americans. Added reinforcement comes from the fact that the Native American population is growing much more rapidly than the total population, and is expected to continue to do so. From 1990 through 2010, the Native American population will grow by 51.4 percent, outpacing the projected gains of 32.4 percent for the black population, 24.2 percent for the total U.S. population, and 17.6 percent for the white population. Also, the Native American population is relatively young. Census 2000 indicates that the median age of Native Americans is 28 years compared to 37.7 for the white population. The implication is that labor force entry and the climbing of career ladders should provide a relatively large boost the group's buying power in future years. Also, in 2004, only 6.4 percent of Native Americans had reached traditional retirement age (65 and over) compared to 13.5 percent of whites.

Entrepreneurial activity is another major force powering the growth of Native American buying power. *The Survey of Minority-Owned Business Enterprises* released by the Census Bureau in 2001 showed that the number of the number of American Indian-owned firms increased twelve times faster than the number of all U.S. firms, and their receipts rose four and one-half times faster than those of all firms. In terms of growth rates, American Indian-owned firms—which primarily are centered in the business services, personal services, and construction industries—outperformed all other groups.

Although comprising less than one percent of the country's population in 2005, Native Americans will control \$51 billion in disposable income, which makes this diverse

group economically attractive to businesses. The nation's 2.9 million Native Americans (including Eskimos and Aleuts) will see their buying power climb from \$19.7 billion in 1990 to \$51.1 billion in 2005, an increase of 159 percent.

In 2005, in order, the ten states with the largest Native American markets are California (\$7.9 billion), Oklahoma (\$5 billion), Arizona (\$3.5 billion), Texas (\$3.3 billion), New Mexico (\$2.3 billion), North Carolina (\$2 billion), Washington (\$2 billion), Alaska (\$1.9 billion), New York (\$1.9 billion), and Florida (\$1.7 billion). This market is slightly more focused on a few states than is the total U.S. consumer market. For example, in 2005, the five largest American Indian markets account for 43 percent of Native American buying power, whereas the five largest total consumer markets account for 38 percent of U.S. buying power. Similarly, the ten largest Native American markets account for 62 percent of Native American buying power and the top ten total consumer markets account for 55 percent of total U.S. buying power.

Ranked by the rate of growth of Native American buying power over 1990-2005, the top ten states are West Virginia (389 percent), Mississippi (307 percent), Kentucky (304 percent), Tennessee (295 percent), Georgia (278 percent), Texas (274 percent), Florida (257 percent), Iowa (252 percent), Colorado (241 percent), and South Carolina (231 percent). Many of these states have relatively small, flourishing markets, but Texas and Florida stand out from the other leading states as the fourth and tenth largest Native American consumer markets in the nation, respectively.

In 2005, the ten states with the largest Native American shares of total buying power include Alaska (8.9 percent), Oklahoma (5.2 percent), New Mexico (4.7 percent), Montana (3.5 percent), South Dakota (3.3 percent), North Dakota (2.3 percent), Arizona (2.2 percent), Wyoming (1.2 percent), Nevada (1.0 percent), and Washington (0.9 percent). Compared to 1990, Native Americans' share of the market will rise the most in New Mexico, Alaska, Montana, North Dakota, and South Dakota, but will decline slightly in Hawaii, Nevada, Oregon, and Washington.

■ Asian Buying Power ■

n 2010, 15.3 million Americans—4.9 percent of the country's population—will claim Asian ancestry, which makes the group a powerful force in the U.S. consumer market. This racial group's shares of the population were 3 percent and 4 percent in 1990 and 2000, respectively; and their enormous economic clout continues to attract more attention from businesses and advertisers. (The Selig Center's data for Asians combines two race categories, including those who identified themselves as Asian or as Native Hawaiian and Other Pacific Islander.)

The Selig Center projects that the nation's Asian buying power will nearly quintuple, climbing from \$117 billion in 1990 to \$269 billion in 2000, to \$397 billion in 2005, and to \$579 billion in 2010. The 397 percent gain from 1990

through 2010 is substantially greater than the increases in buying power projected for whites (164 percent), the U.S. as a whole (177 percent), blacks (222 percent), and Native Americans (251 percent), but is lower than the 413 percent gain projected for Hispanics. At \$397 billion in 2005, the U.S. Asian market already outshines the entire economies of all but sixteen countries—it is smaller than the GDP of Russia and larger than the GDP of Switzerland.

The group's fast-paced growth in buying power demonstrates the increasing importance of Asian consumers and should create great opportunities for businesses that pay attention to their needs. Because the group includes consumers of so many national ancestries, languages, and such diverse cultures, firms that target specific subgroups— Chinese or Filipino, for example—may find niche markets particularly rewarding.

Demographics are a key, too. The Asian population is growing more rapidly than the total population, mostly because of strong immigration, a trend that is expected to

The Multicultural Dollar

Where Asians Spend More

food housing household appliances telecom services education personal insurance

continue. In 2010, the Asian population will reach 15.3 million, or more than double its 1990 base of 7.5 million. This 102 percent gain in population exceeds that projected for any other racial group, yet in comparison; it falls well below the 119 percent gain expected for the Hispanic population.

The Asian population of the U.S. is relatively young: Census 2000 indicates that the median age of Asians is 32.7 years compared to 37.7 years for whites. Thus, a larger proportion of Asians is either entering the workforce for the first time or is moving up on their career ladders. Also, a much smaller proportion of them are of traditional retirement age. For example, in 2004, only 8.4 percent of Asians were over 65, compared to 13.5 percent of non-Hispanic whites.

Another factor contributing to Asian buying power is that nearly all Asians are urbanites. Data show that 95 percent of Asians lived in metro areas in 2002 compared to only 78 percent of non-Hispanic whites. The economic rewards of education also provide a big boost. Asians are much better educated than is the average American, and therefore Asians hold many top-level jobs in management or professional specialties. According the U.S. Census Bureau, in 2003, 50 percent of Asians over age 25 had a bachelor's

degree or higher compared to only 30 percent of whites. Moreover, the Census Bureau estimates that over a working lifetime the payoff for a bachelor's degree compared to a high school diploma is between \$700,000 and \$1 million; and the payoff for an advanced degree compared to a high school diploma is about \$2 million.

The increasing number of successful Asian entrepreneurs also helps to increase the group's buying power. According to the 2001 Survey of Minority-Owned Business Enterprises, the number of Asian-owned businesses—which mostly center on business services, personal services, and retailing—increased more than four times faster than the number of all U.S. firms. The 2002 Survey of Business Owners (Advance Report) indicates that 5.9 percent of U.S. business owners are Asian, which is much higher the group's 4.4 percent share of the U.S. population.

In 2005, the ten states with the largest Asian consumer markets, in order, are California (\$128.8 billion), New York (\$40.1 billion), New Jersey (\$23.7 billion), Texas (\$22.6 billion), Hawaii (\$19.2 billion), Illinois (\$18.2 billion), Washington (\$12.5 billion), Virginia (\$10.9 billion), Florida (\$10.7 billion), and Massachusetts (\$10.1 billion).

Compared to the overall consumer market, the group's spending is much more focused geographically. In 2005, the five and the ten states with the largest Asian consumer markets account for 59 percent and 75 percent of Asian buying power, respectively. In contrast, the five and the ten largest total consumer markets account for 38 percent and 55 percent of U.S. buying power, respectively. One positive implication of this extreme geographic concentration is lower marketing costs. Still, zip-code mailings, the use of selective media, the Internet, and other techniques can be used to reduce the costs of reaching Asians in states where the group's market share is slim.

In 2005, California stands out as the nation's only state-level minority racial market that exceeds \$100 billion (\$128.8 billion), and it alone accounts for 32 percent of the nation's Asian consumer market. The only state-level minority markets that are larger are the Hispanic markets in California and Texas, and those markets are defined based on ethnicity rather than race. From 1990-2005, California will account for 30 percent of the expected increase in the nation's Asian buying power, or \$85 billion of the \$280 billion gain. Despite the geographic focus of this consumer market, Asian buying power is attaining critical mass in a growing number of states. In 2000, only eight states had over \$10 billion in Asian buying power, and by 2010, thirteen states will have reached this benchmark.

Ranked by the rate of growth of Asian buying power over 1990-2005, the top ten states are North Carolina (536 percent), Nevada (533 percent), Nebraska (513 percent), South Dakota (512 percent), Georgia (481 percent), Iowa (478 percent), Minnesota (459 percent), Mississippi (455 percent), North Dakota (451 percent), and Tennessee (434 percent). None of these states is among the nation's ten largest Asian markets, but Georgia ranks fourteenth, North

Carolina ranks seventeenth, and Minnesota ranks eighteenth. From a business-to-consumer perspective, these three states are among the nation's rapidly emerging Asian markets.

Nationally, Asian consumers' share of the market will increase from 2.7 percent in 1990 to 4.4 percent in 2005. In order, the ten states with the largest shares of total buying power that is Asian in 2005 are Hawaii, where Asians account for 50.7 percent of the state's buying power, California (10.9 percent), New Jersey (7.2 percent), New York (6.1 percent), Washington (5.9 percent), Nevada (4.7 percent), Maryland (4.6 percent), Illinois (4.5 percent), Virginia (4.4 percent), and Massachusetts (4.1 percent). Except for Hawaii, where Asians' market share will drop by 7.2 percent, the share of buying power controlled by Asian consumers will rise in every state. The 3.8 percent gain in Asians' share of New Jersey's consumer market (3.4 percent in 1990 to 7.2 percent in 2005) will be the largest share increase in the nation, followed by the 3.2 percent increase in market share in California (7.7 percent to 10.9 percent). Also noteworthy is the 2.8 percent gain in share expected in New York (3.3) percent share in 1990 to 6.1 percent in 2005).

Thanks to their higher average income levels, Asian consumers spend more than the average U.S. household on food (groceries and dining out), housing, household operations, telecom services, household appliances, children's clothing, public transportation, education, and personal insurance and pensions. They spend much less of their budgets on electricity, vehicle purchases, health care, tobacco products, and entertainment.

The same survey indicates that there are 2.8 persons per Asian household compared to 2.5 persons for the average household. Asians have more wage earners (1.5) per household, but have only 1.6 vehicles per household compared to 1.9 vehicles for the average household. Only 83 percent of Asian households own or lease at least one vehicle compared to 88 percent of all households.

There also is a moderate gap in homeownership rates. According to 2004 data, 60 percent of Asians are homeowners compared to 73 percent for whites. The homeownership rate for Asians was only 52 percent in 1994, however.

■ Hispanic Buying Power

The immense buying power of the nation's Hispanic consumers continues to energize the nation's consumer market, and Selig Center projections reveal that Hispanics will control about \$736 billion in spending power in 2005. In fact, Census 2000 showed that more than one person in eight who lives in the U.S. is of Hispanic origin, and the U.S. Hispanic population continues to grow much more rapidly that the non-Hispanic population. By 2010, nearly one person out of every six living in the U.S. will be of Hispanic origin.

Over the twenty-year period, 1990-2010, the nation's Hispanic buying power will grow dynamically. In sheer

dollar power, Hispanics' economic clout will rise from \$212 billion in 1990, to \$490 billion in 2000, to \$736 billion in 2005, and to \$1,087 billion in 2010. The 2010 value will exceed the 1990 value by 413 percent—a percentage gain that is far greater than either the 165 percent increase in non-Hispanic buying power or the 177 percent increase in the buying power of all consumers. U.S. Hispanic buying power will grow faster than African-American buying power (222 percent), Native American buying power (251 percent), and Asian buying power (397 percent).

In 2010, Hispanics will account for 9.2 percent of all U.S. buying power, up from 5 percent in 1990. Due to this brisk growth, Hispanic buying power (\$860 billion) will exceed African American buying power (\$856 billion) in 2007.

Of the myriad forces supporting this substantial and continued growth, the most important is favorable demographics, but better employment opportunities also help to increase the group's buying power. Because of both higher rates of natural increase and strong immigration, the Hispanic population is growing more rapidly than the total population, a trend that is projected to continue. Between 1990 and 2010, the Hispanic population will increase by 118.9 percent compared to 14.8 percent for the non-Hispanic population and the 24.2 percent gain for the total population.

The relatively young Hispanic population, with more of them either entering the workforce for the first time or moving up on their career ladders, also argues for additional gains in buying power. Hispanics' spending patterns already help to determine the success or failure of many youth-oriented products and services. In 2004, 34 percent of the Hispanic population was under age 18 compared to 25 percent of the total population. Also, in 2004, only 5.2 percent of Hispanics were over 65, compared to 12.4 percent of the total population.

The increasing number of Hispanic business owners is another potent force powering this consumer market. The Survey of Minority-Owned Business Enterprises released by the U.S. Department of Commerce showed that the number of Hispanic firms is growing more than four times faster than the number of all U.S. firms, and that their receipts also rose more quickly than those of all firms. This jump in entrepreneurial activity, coupled with a rising level of educational attainment, illustrates Hispanics' upward mobility. The U.S. Census Bureau indicates that, in 2003, 57 percent of Hispanics over age 25 had a high school diploma compared to 53 percent a decade ago. The proportion with a bachelor's degree increased from 9 percent to 11 percent. The Census Bureau cautions, however, that levels of educational attainment for Hispanics are lower than those for non-Hispanic whites, blacks, and Asians largely because of the vast number of less educated foreign-born Hispanics. Only 45 percent of foreign-born Hispanics have a high school diploma compared to 74 percent of U.S.-born Hispanics.

Hispanic refers to a person of Mexican, Puerto Rican, Cuban or other Spanish/Hispanic/Latino culture or origin, and is considered an ethnic category rather than a racial group. Persons of Hispanic origin therefore may be of any race, and since their culture varies with the country of origin, the Spanish language often is the uniting factor. Census 2000 indicates that the majority of Hispanics living in the U.S. are of Mexican origin (58.5 percent), which suggests that a great many Hispanics share similar backgrounds and cultural experiences. Nonetheless, spending patterns differ significantly based on country of origin, and the composition of the nation's Hispanic population is changing. The proportion of Mexicans is dropping, while the numbers of people from Cuba, Central and South America, and other Spanish-speaking areas continues to rise.

This major group, which will comprise 14.3 percent of the country's population in 2005, will have disposable income of \$736 billion. In 2005, the ten states with the largest Hispanic markets, in order, are California (\$202.7 billion),

The Multicultural Dollar

Where Hispanics Spend More

groceries phone services major appliances furniture children's clothing footware

Texas (\$127.4 billion), Florida (\$75.1 billion), New York (\$62.7 billion), Illinois (\$32.8 billion), New Jersey (\$28.4 billion), Arizona (\$24.2 billion), Colorado (\$17.1 billion), New Mexico (\$14.2 billion), and Georgia (\$10.6 billion).

Hispanics and their buying power are much more geographically concentrated than non-Hispanics. California alone accounts for 28 percent of Hispanic buying power. The five states and the ten states with the largest Hispanic markets account for 68 percent and 81 percent of Hispanic buying power, respectively. In contrast, the five states with the largest non-Hispanic markets account for only 38 percent of total buying power and the ten largest non-Hispanic markets account for only 55 percent of total buying power.

The top ten states, as ranked by the rate of growth of Hispanic buying power over 1990-2005, are North Carolina (882 percent), Arkansas (868 percent), Georgia (696 percent), Tennessee (668 percent), Nevada (641 percent), Alabama (569 percent), Minnesota (547 percent), Kentucky (527 percent), North Dakota (499 percent) and South Carolina (498 percent). In market size, Georgia, Nevada, and North Carolina also rank tenth, eleventh, and fifteenth, respectively, so, these states are three of the most attractive Hispanic markets in the nation.

Between 1990 and 2005, the share of buying power controlled by Hispanic consumers will rise from 5 percent to

8.1 percent, and the group's share will rise in every state. In 2005, the ten states with the largest Hispanic market shares will be New Mexico (29.5 percent), Texas (19.2 percent), California (17.2 percent), Arizona (15.2 percent), Florida (14.3 percent), Nevada (13.2 percent), Colorado (10.8 percent), New York (9.5 percent), New Jersey (8.6 percent), and Illinois (8.1 percent). Nevada's 7 percent shift in Hispanic market share, from 6.2 percent in 1990 to 13.2 percent in 2005 will be the nation's largest. Texas will see its Hispanic market share climb from 12.4 percent to 19.2 percent, a gain of 6.8 percent, which is a remarkable for a state with such a large, established market. Hispanics' share of Florida's market will rise by 5.6 percent, from 8.7 percent to 14.3 percent. Arizona's Hispanics will claim 15.2 percent of the state's buying power, up 5.4 percentage points from their 9.8 percent share in 1990. New Mexico's Hispanic population will claim 29.5 percent of that state's buying power, 5.2 percent more than their 24.4 percent share in 1990.

Because of differences in per capita income, wealth, demographics, and culture, the spending habits of Hispanics as a group differ from the average U.S. consumer. The most recent *Consumer Expenditure Survey* indicates that Hispanic consumers spent in total only about 83 percent as much as the average non-Hispanic consumer and spent a much higher

proportion of their after-tax income on goods and services.

Despite their lower average income levels, Hispanic households spent more on groceries, telephone services, furniture, major appliances, men's and boys' clothing, children's clothing, and footwear. Also, Hispanics spent a higher proportion of their money on eating out, housing, and gas and motor oil. They spent about the same amounts as non-Hispanics on alcoholic beverages, natural gas and electricity, housekeeping supplies, women's and girls' clothing, public transportation, and personal care products and services.

Compared to the non-Hispanic population, Hispanics spent substantially smaller proportions of total outlays (and substantially less money) on health care, entertainment, education, and personal insurance and pensions.

The same survey found that Hispanic households are larger than non-Hispanic households (3.3 persons per household versus 2.4 persons for non-Hispanics), and have twice as many children under 18. On average, there are 1.6 vehicles per Hispanic household compared to 2 vehicles per non-Hispanic household. Also, 2004 data show that only 48 percent of Hispanics are homeowners compared to 72 percent of non-Hispanics. In 1994, only 41 percent of Hispanics were homeowners.

Methodology

Because there are no direct measures of the buying power of African Americans, Native Americans, Asians, Whites, and Hispanics, these estimates were calculated using national and regional economic models, univariate forecasting techniques, and data from various U.S. government sources. The model developed by the Selig Center integrates statistical methods used in regional economics with those of market research. In general, the estimation process has two parts: estimating disposable personal income and allocating that estimate by race or ethnicity based on both population estimates and variances in per capita income.

The Selig Center's estimates of disposable personal income (the total buying power of all groups, regardless of race or ethnicity) are reported in Table 5. Total buying power for 1990-2004 equals disposable personal income as reported in the National Income and Product Accounts tables by the U.S. Department of Commerce, Bureau of Economic Analysis, Regional Economic Information System on March 28, 2005. Based on the data provided by the Commerce Department, the Selig Center prepared projections of total buying power for 2005-2010.

Defined as the share of total personal income that is available for spending on personal consumption, personal interest payments, and savings, disposable personal income measures the total buying power held by residents of an area. In 2004, 95.2 percent of disposable personal income was used to purchase goods and services (personal consumption expenditures); the remaining 4.8 percent represents personal savings, non-mortgage interest paid by persons, or personal transfer payments to either government or to persons living abroad.

Because the Selig Center defines buying power as disposable personal income, the state-by-state estimates of the total buying power of all consumers for 1990-2004 are identical to the estimates of disposable personal income issued by the U.S. Bureau of Economic Analysis (BEA) in 2005. Based on trends in the historical data, the Selig Center prepared independent estimates of total buying power (disposable personal income) for 2005-2010.

The Selig Center's estimates are consistent with the concepts and definitions used in the National Income and Product Accounts (NIPA). Readers should note that buying power is not the equivalent of aggregate money income as defined by the Census Bureau. Because the Selig Center's estimates are based on disposable personal income data obtained from the BEA, rather than money income values issued by the Census Bureau, the result is significantly higher estimates of buying power. There are several reasons for this lack of correspondence. First, the income definition used by the BEA is not the same as the definition used by the Census Bureau. Second, Census income data are gathered through a nationwide survey sample of households, and respondents tend to underreport their income, which accounts for much of the discrepancy. Finally, the population universe for the Census money income estimates differs from the universe used by the BEA. It should also be emphasized that the Selig Center's estimates are not equivalent to aggregate consumer expenditures as reported in the Consumer Expenditure Survey that is conducted each year by the U.S. Bureau of Labor Statistics.

The Selig Center's estimates of total buying power were allocated to each racial group and Hispanics based on population estimates and variances in per capita personal income by race or ethnicity. For 1990-1999, the Selig Center used the U.S. Census Bureau's time series of intercensal population estimates that were last revised on August 5, 2004. The Census Bureau indicates that these estimates were developed to take into account differences between the postcensal time series population estimates for the 1990s and Census 2000 results. For 2000-2003, the Selig Center relied upon the population distributions provided by the Census Bureau's Population Estimates Program that were released on September 30, 2004. Because there are differences between these two data series there is a series break between 1999 and 2000, which limits the comparability of the estimates for 1990-1999 to those for 2000-2010. Perhaps the most important difference is that the multiracial category first appears in 2000. Based on trends in the historical data, the Selig Center prepared independent population projections for 2004-2010.

On March 18, 2004, the Census Bureau released interim projections of the U.S. population by age, race, sex, and Hispanic origin, but the data were only provided for decennial census years (2000, 2010, 2020, 2030, 2040, and 2050). Due to these considerations, the Selig Center's population estimates were not constrained to match the interim projections, though they were taken into consideration when we produced our independent projections.

The Census Bureau also has modified the definitions of the racial categories, by assigning persons who selected "some other race" to a specified race (e.g., White, Black or African America, American Indian and Alaska Native, Asian, Native Hawaiian and other Pacific Islander). This included persons who selected "some other race" in combination with a specified race. This was done to reconcile the Census 2000 race categories with those race categories that appear in the data from administrative records, which are used to produce the Census Bureau's population estimates and projections. Approximately 18.5 million people identified "some other race" as part of, or as their only, race response.

For 1990-2010, a relative income adjustment factor was estimated for each group for each geographic area to compensate for the variation in per capita personal income (and by extension, in per capita disposable personal income) that is accounted for by race or ethnicity. These factors were calculated on an annual basis using Summary File 3 (SF 3) data regarding income by race and Hispanic origin from Census 2000 and per capita money income data by race for local areas that were gathered during the 1990 Census of Population and Housing. Also, the Selig Center relied on national-level data obtained from the Census Bureau's Current Population Surveys. The absence of current detailed data at the state and sub-state level clearly makes the buying power estimates and projections for all of the racial or ethnic groups less precise, increasing their statistical error.

The 2003 expenditures data by item for African Americans, Hispanics, Asians, and the comparison groups were obtained directly from the *Consumer Expenditure Survey* that was released by the Bureau of Labor Statistics on November 30, 2004. The amounts are direct out-of-pocket expenditures, and do not include reimbursements, such as for medical care or car repairs covered by insurance.
